Over the last 15 years the Aerospace, Avionic and Military markets (Markets) have seen a transition to the use of Components of the Shelf (COTS). Ceramic, plastic packages and combo lids are part of the COTS movement. This presentation will show how a committed distributor/reseller can support the Markets to meet MIL-STD-883, QML, JAN38510, JANTX, JANTXV, and JANS quality levels per MIL-PRF-19500 and MIL-STD-750, shorten the overall build cycle, mitigate supply risk disruptions, and provide custom solutions as needed. We will conclude with COTS solutions achieved with collaborative efforts between customers and manufacturers.
