

# **Evolution of European EEE standards with regards to COTS and New Space**

Dr. Denis Lacombe  
ESA – European Space Agency  
[Denis.Lacombe@esa.int](mailto:Denis.Lacombe@esa.int)

Most of European space industry rely on ECSS standard for the procurement and use of EEE parts: ECSS-ST-Q-60 (EEE parts procurement), ECSS-ST-Q-60-13 (commercial EEE parts procurement) and ECSS-ST-Q-30-11 (derating). These 3 standards are under revision and will include update that take into account recognition of automotive parts certification in relation with New Space. The presentation will highlight the main evolutions of these standards and an ESA proposal on mission classification with regards to EEE parts selection.
