

New Products Offerings for Military and Spacecraft Electronics with various screening and QCI options

Richard Duong
Q-Tech Corporation
richard.duong@q-tech.com

The need for high-precision, lower power consumption, high-resistant to shock and vibration, multiple outputs, high frequency bandwidth, and in small form factor for spacecraft electronics and military conventional and nuclear missile systems has let Q-Tech focus and expand new products and technology. With the recent acquisition of AXTAL, a German manufacturer of precision crystal oscillators, Q-Tech provides a strategic alliance in providing a broad range of crystal oscillators for the applications.

This talk will illustrate various options of Quartz crystal XOs, TCXOs, MCXOs, OCXOs, SAW, and LSAW oscillators performance and quality levels.
