

Supply Chain Quality Challenges

Zac Elliott / Asaf Jivilik

Siemens / Cybord

zac.elliott@siemens.com / asaf.j@cybord.ai

The supply chain for components is facing significant challenges, such as shortages and unsecured procurement in the free market with low-quality components. Cybord's Inline SaaS platform offers a solution by providing real-time visibility into all electronic components' authenticity and quality within the production process, resulting in increased process productivity and secure lifetime reliability for Original Equipment Manufacturers (OEMs). OEMs can achieve 100% visibility and traceability into the quality of their components and assembly, allowing them to identify and address defects early in production, preventing reliability issues.
