The CHIPS Act; ESG legislation; geopolitics; commodity and raw material shortages: we're still experiencing a perfect storm of supply chain chaos in 2023. What should you be aware of when it comes to supply chain and procurement risk? This session, hosted by Peter Guinto, President of Resilinc's Government, Defense, and Aerospace division, will cover:

- Supply chain disruption data and broader procurement risk trends for the year (CHIPS Act, Inflation Reduction Act, commodity volatility, geopolitics)
- How and why component engineers must lead in this space
- Lessons from the trenches including what organizations are doing to comply with new requirements
- Why supply chain resiliency begins with supplier network mapping and visibility down to the part/commodity level (and how to accomplish this)
