

The Numbers Crunch

Richard Smith
ERAI, Inc.
rsmith@erai.com

The presentation will analyze historical reporting trends using data collected by ERAI over the last decade with a comparative emphasis over the last two years. Along with annual report totals, the data will review the recurrence and classification of the reported parts as well as a change in the types of components that are being counterfeited. We will additionally explore how supply chain fluctuations and product availabilities affect counterfeiting trends and discuss the factors affecting counterfeit part reporting.
